12	<p><b>Project Description:</b></p> <p><b><u>This Project's Scope of Work shall include, but not be limited to, the following:</u></b></p> <p>The Division of Construction Services (DCS), Department of Administrative services (DAS) is seeking the services of a highly talented and experienced <b>Construction Manager at Risk (CMR)</b>. The CMR solicits trade bids on behalf of the Owner from trade subcontractors on a competitive basis. The CMR shall agree upon a Guaranteed Maximum Price to perform the work identified in the Bid Documents and enters into contracts with these trade subcontractors to perform their trade work in support of the renovation and expansion of Barnard Hall at Central Connecticut State University in New Britain, CT.</p> <p>This provides for an addition and renovations to Barnard Hall, a four-story, 78,443 gross square foot academic facility constructed in 1953. This building houses the College of Education and Professional Studies, the Nursing Program, the Information Technology Department, and the University's main campus computer server room.</p> <p>There are four major components of this project. The first provides for a 20,000 gross square foot four-story addition, which will house new offices for staff and faculty and create a space for student advising and services related to student teaching. It is expected that the exterior of this addition will be designed in the Georgian style and blend with architectural style of Davidson Hall and the new Willard/DiLoreto/Infill facilities.</p> <p>The second component of the project will include the replacement of a window system. Installed during the original construction in 1953, these windows are deteriorating. They are difficult to open and in most cases, cannot be properly secured.</p> <p>The third component calls for a new central HVAC system for the building and the addition. Many of the existing rooms are either not air conditioned or have inefficient window or dedicated split systems. Connecting the building onto the existing campus heating and cooling plant will increase efficiency of the building.</p> <p>The final component of this project will include renovations to approximately 11,000 gross square feet of the facility. Work will include, but not be limited to the removal of all existing lockers and installation of new corridor walls, display cabinets and information centers; the removal of existing ceiling systems (including old, obsolete ductwork), and associated electrical work.</p> <p>Air conditioning units for the campus server room are currently located on the roof of Barnard Hall. During construction, it is critical that air-conditioning of the campus computer server room not be interrupted. Therefore this project shall include temporary measures to keep this function operational.</p> <p>All improvements will meet ADA standards and comply with CCSU facility standards.</p>
