The left side of the room contains several pieces of equipment. At the top, two white pipes run vertically down the wall. Below them is a large black electric fan with a silver grille, mounted on top of a grey water heater. The water heater has a yellow EnergyGuide label with the number 423 and a blue label. To the right of the fan is a blue and white electronic device, possibly a scale or a small refrigerator, with a stack of papers on top. Below this device is another stack of papers and a clipboard with a document attached.

On top of the lockers, there is a row of boxes. From left to right, there is a white box with 'IRON MOUNTAIN' branding and a logo, a brown cardboard box, another white box with 'IRON MOUNTAIN' branding, and a clear plastic jar with a red lid. The white boxes have labels with instructions like 'AFFIX TRANSMITTAL LABEL HERE' and 'REFERENCE LABELS WILL BE AFFIXED HERE'.

A row of grey metal lockers with multiple compartments and drawers. The lockers are arranged in two rows. The top row has three large compartments, and the bottom row has four smaller drawers. Each compartment has a small handle. There are several labels on the drawers, including 'VEHICLE I.D. LOCATIONS 4 - THRU - 6', 'INSPECTION GUIDELINES', and 'VEHICLE I.D. LOCATIONS 5 - THRU - 8'. A black chair with a circular logo is partially visible in the bottom right corner.

A large bulletin board with a dark wood frame is the central focus. It is densely packed with various items:

- On the left side, there are several photographs, including one of a group of people and another of a person in a uniform. A sign with the name "LA LEY" is visible on the wall to the left of the board.
- The center and right sections are covered with numerous documents, including forms, certificates, and notices. One prominent document is titled "NP-5 CT Police & Fire Union".
- At the bottom of the board, there are blue signs that read "INSPECTOR MOTOR VEHICLES CONTROL" and "MOTOR VEHICLES DEPT OF MOTOR VEHICLES".
- Below the board, a wire mesh tray holds several metal folders and a sign that says "MILEAGE SHEETS".

A framed award plaque is mounted on the wall. It features the DMV logo and the text:

TRAINING/MULTI-MEDIA ROOM
PROCEDURES FOR OPERATING SYSTEMS

HVAC (Air conditioning/ventilation) Controls:
The HVAC control is located in the center column between the two doors. Lift the cover from the bottom to access the buttons. As this is a unit or panel control, it is not designed to function with a number of types of HVAC units, some of the buttons and settings serve functions the system does not use. These buttons and settings, as are listed below, should not be used.

The air-cooling portion of the system is designed for use **only on days when the outside temperature is above 65 degrees**. Use of the outdoor cooling condenser could damage the compressor during cold weather. When the room needs cooling during cold weather, run the fan on one of its three speeds. Based on cooling needs and outside temperature, the system is designed to bring a small percentage of outside fresh air into the room when the fan is running, thus cooling the room in winter. (Show are light) The buttons by color code and their functions:

- **Orange-Operating Mode**
Off, Heating, Auto, Cooling changes a button is pressed, as shown on center view screen. Only use the Off and Cooling function modes. As this unit has no heat or auto function. Do not use the cooling function if it is less than 55 degrees outside. It avoids damage to the unit.
- **Yellow-Fan speed control**
Off, high, medium, low as button is pressed, as shown by fan symbol followed by wavy lines on screen. Fan comes on automatically when the cooling button is pressed. During cold weather, fan used alone will bring cool, fresh outside air into the room. Control amount and room temperature by changing fan speed, starting with the lowest speed first to avoid super cooling the room.
- **Blue**
During cooling mode (air conditioning), use this button to lower the temperature a degree or two.
- **Red**
During cooling mode, use this button to raise the temperature a degree or two. With both the blue and red buttons, make changes only a degree or two at a time. Temperature will revert back to the factory set energy saving setting after a period of time to save electricity.
- **Green-Operating Fan**
If a system does not have these functions available, do not use these buttons.
 - The actual room temperature will show on the screen unless changed.
 - Please remember to turn the mode and the fan buttons off when you are finished in the room.

DO NOT OPERATE UNIT
IN COOL MODE WHEN OUTSIDE
AIR TEMPERATURE IS BELOW 55

Instant Cutting Jobs
The labor market is changing rapidly, and many workers are being laid off. Instant Cutting Jobs are a new way to find work. They are short-term, flexible jobs that can be done from home or in a retail setting. They are perfect for people who need a quick start or want to supplement their income.
