LTP4/LTP5/A34/A35

Framing Angles and Plates

The larger LTP5 spans subfloor at the top of the blocking or rim board. The embossments enhance performance.

The LTP4 Lateral Tie Plate transfers shear forces for top plate-to-rim board or blocking connections. Nail holes are spaced to prevent wood splitting for single and double top plate applications. May be installed over plywood sheathing.

The A35 angle's exclusive bending slot allows instant, accurate field bends for all two- and three-way ties. Balanced, completely reversible design permits the A35 to secure a great variety of connections.

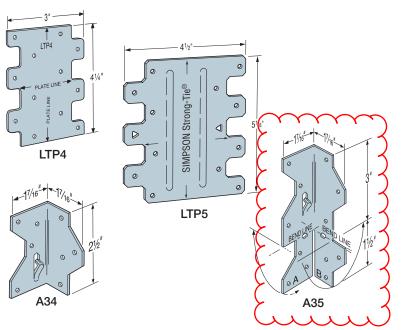

Material: LTP4/LTP5 - 20 gauge; all others - 18 gauge

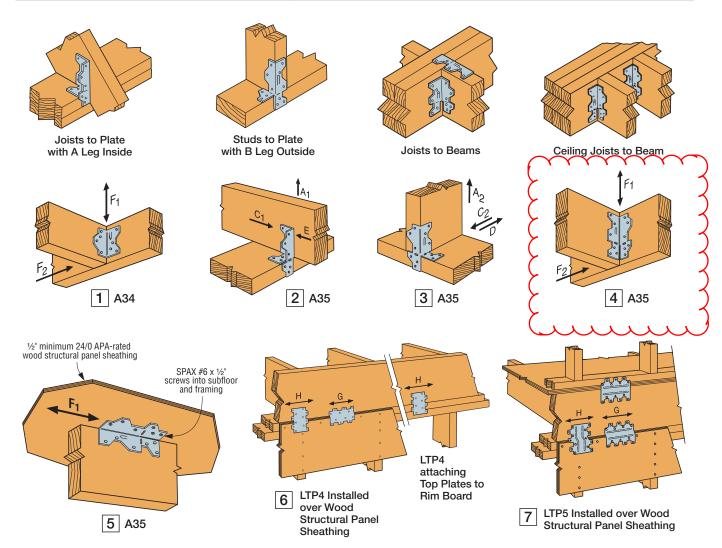

Finish: Galvanized. Some products available in stainless steel or ZMAX[®] coating; see Corrosion Information, pp. 15–18.

Installation:

- Use all specified fasteners; see General Notes
- A35 Bend one time only

Codes: See p. 14 for Code Reference Key Chart

Straps and Ties

LTP4/LTP5/A34/A35

Framing Angles and Plates (cont.)

These products are available with additional corrosion protection. For more information, see p. 18.

 These products are approved for installation with the Strong-Drive[®] SD Connector screw. See pp. 39–40 for more information.

1. Allowable loads are for one angle. When angles are installed on each side of the joist, the minimum joist thickness is 3".

2. Some illustrations show connections that could cause cross-grain tension or bending of the wood during loading

if not reinforced sufficiently. In this case, mechanical reinforcement should be considered.

3. LTP4 can be installed over %" wood structural panel sheathing with 8d x 11/2" nails and achieve 0.72 of the listed load,

or over 1/2" and achieve 0.64 of the listed load. 8d commons will achieve 100% load.

4. LTP4 satisfies the IRC continuously sheathed portal frame (CS-PF) framing anchor requirements when installed over raised wood floor framing per Figure R602.10.6.4.

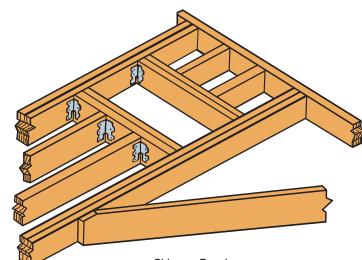

5. The LTP5 may be installed over wood structural panel sheathing up to ½" thick using 8d x 1½" nails with no reduction in load.

6. Connectors are required on both sides to achieve F_2 loads in both directions.

7. A34 and A35 installed with 8d x 1 $\frac{1}{2}$ " nails onto 1 $\frac{1}{4}$ " LSL material will achieve 0.90 of the listed F₁ and F₂ loads.

8. Fasteners: 8d x 11/2" = 0.131" dia. x 11/2" long; SPAX #6 x 1/2" e 0.138" dia. x 1/2" long. See pp. 26–27 for other nail sizes and information.
