

**Certification Installation Service to include:**

Labor to remove existing Chart plotter and Radar System, completely. Labor to Install above listed Raymarine system hardware. Installation to be performed by a Raymarine Certified Installation facility (as posted on the Raymarine Website), to qualify for an extended 3 yrs. of free onboard warranty service (vs 2 years of recreational carry in, warranty repair).

Installation to include all necessary hardware and cables, for a completely Integrated Raymarine system.

Depth Transducer hull angles to be selected by the Raymarine installer, with an effort to reuse the holes in the hull from the existing depth transducers (which are slated to be replaced with new Raymarine Depth transducers as listed above) New Raymarine Navigational Hardware to be interfaced into existing VHF Radios and existing L3 AIS Transponder, as allowable.

Upon completion of the new Raymarine Navigational hardware installation, installer will down load and install the most current revision of Raymarine operating software, so that all Raymarine hardware will be working off of the same platform of software.

An at dock system orientation will be required, post installation.

Installation facility agrees to perform all required Raymarine Factory Warranty Service for the duration of the warranty term, on a First Responder priority basis.
