Previous Addendums:

Addendum #1 dated 10/23/2019

TO: Prospective Bid Proposers:

This Addendum forms part of the "Contract Documents" and modifies or clarifies the original "Contract Documents" for this Project dated October 31, 2019. Prospective Bid Proposers <u>shall</u> acknowledge receipt of the total number the Addenda issued for this Project on the space provided on Section 00 41 00 Bid Proposal Form.

Failure to acknowledge receipt of the total number the Addenda issued for this Project on the space provided on Section 00 41 00 Bid Proposal Form shall subject Bid Proposers to disqualification.

The following clarifications are applicable to drawings and specifications for the project referenced above.

Item 1:

Question 1: During the pre-bid we brought up the question of removing the existing concrete island in order to provide for a uniform and integral slab installation. Will the island be removed? If so, how will the existing electrical circuits as well as loop detectors be terminated? Additionally, will the island need to be replaced? If so, please provide details.

Response 1: Yes, the island will be removed. The electrical circuits will be terminated per current electrical code standards. The loop detectors are in the bituminous pavement and shall be protected or reconnected if disturbed. The island will be replaced in kind with the same detail as currently exists. The card reader to be reset and the gate arm electrical cabinets are to be removed and disposed of properly.

Item 2:

Question 2: We respectfully request that you consider significantly increasing the amount of calendar days. The complexity of the slab and deicing system replacement and site logistics will require much longer than the 30 days to complete. In conversations with our mechanical subcontractor, we would need approximately 60-70 days in order to properly complete the project. This would provide for suitable concrete curing time as well.

Response 2: The calendar days will be changed from 30 days to 60 days for substantial completion. Discard the bid proposal that is on line and in the specification and replace with the attached one.

Item 3:

Question 3: Please clarify if the existing trench drain is to remain in place? If so, will saw cutting the existing slab approximately 24" from the grate edge be acceptable?

Response 3: The trench drain shall be replaced in kind.

Item 4:

Question 4: We respectfully request that you consider performing this work next spring when conditions will be suitable for the pouring, finishing and curing of the concrete slab. Additionally, we are concerned with both the lack of adequate temperature for acceptable concrete surface curing as well as the likelihood of salt or other deicing compounds being tracked in onto the slab surface and the potential for spalling.

Addendum No.: 2

Date Of Addendum: November 5, 2019

Response 4: This may be considered with the low bidder; however, the current bid is for a 2019-2020 fall installation. All appropriate measures shall be accounted for including but not limited to heating, protection, appropriate admixtures, proper curing and other measures as appropriate and in accordance with the CT DOT 817 Standard Specs for installing cold weather concrete.

Item 5:

Question 5: Does the owner know what type of glycol is currently in this system? What brand? Maybe a submittal or MSDS for this product? We need to know this for disposal!

Response 5: the Owner is not aware of the specific brand of glycol but disposal facilities handle all glycols the same way. Soil sampling and testing will be required by the Contractor once the concrete is removed. Freeman Companies Environmental staff will be available for oversight during this process.

The Contractor will need to submit a Soil Management Plan for disposal of the soil material underneath the concrete to Freeman Companies for approval. The Contractor will be responsible for paying the lab fees for Pre-Characterization sampling and testing of one composite sample of any impacted soil and a select grab sample for volatile organic compound analysis. The Contractor will also be responsible for the lab fees for up to 8 confirmation samples after the impacted soil removal to confirm impacted material is remediated.

The Pre-Characteristic sampling will include the following:

- Extractable Total Petroleum Hydrocarbons Via the Connecticut Department of Public Health Method
- EPA Method 8260 VOCs by Gas Chromatography/Mass Spectrometry (GC/MS)
- EPA Method 8270 SVOCs via GC/MS
- EPA Method Series 6000 Total RSR Metals
- EPA method 8082 PCBs
- Waste Characterization Parameters including conductivity, pH, Reactive Cyanide, Reactive Sulfide, Total Cyanide and Flashpoint

All questions must be emailed (not verbal nor by phone) to the consulting Engineer (Jeff LeBeau, Email: llebeau@freemancos.com) with copies sent to the DAS/CS Project Manager (Ashour Gevargisnia, Ashour.Gevargisnia@ct.gov).
