

DOIT MASTER AGREEMENT NUMBER:

B-03-012

DOIT APPROVAL DATE:

10/1/2006**VENDOR NAME: AT&T CORP.****FEIN: 13-4924710****SERVICE/PRODUCT NAME: Video Bridging Service****SERVICE/PRODUCT DESCRIPTION:**

AT&T offers a complete portfolio of high quality videoconferencing services to meet the diverse needs of your end user community. Users with videoconferencing equipment and appropriate bandwidth may have access to the following AT&T value-added services:

- Bridging of multipoint and point-to-point videoconferences
- Any mix of ISDN (H.320) and IP (H.323) video systems supported on the same call
- Reserved and reservationless conferences
- Assisted and self-service options
- Event Management Services for coordination and assistance with special events
- On-line tools for management and control of videoconference activity and scheduling

AT&T's services are powered by a set of advanced on-line tools to help you better manage the scheduling and initiation of videoconference meetings. The **AT&T Video Meeting Center** features two unique applications – *Video Schedule* and *Video On-Demand*. *AT&T Video Schedule* is a web-based tool that allows a user to schedule rooms and reserve bridge resources for videoconference meetings. *AT&T Video On-Demand Service* allows users to launch and control videoconferences without a reservation. In addition, **On-Line Reports** provide authorized users with immediate access to conference usage and activity to help better manage and control costs.

AT&T Video Bridging Service

Bridge Dial-Out – offers the most convenient conference initiation option. Each site needs only to have the videoconferencing system powered on, and an AT&T conference producer will dial-out to each location during a designated set-up time. Dial-out is a reliable method for connecting sites before the scheduled start time as well as re-connecting sites during the conference should a site get dropped.

Dial-In to Bridge – with this option, participants will be assigned a dial-in number prior to the conference. They are responsible for initiating a call to AT&T's bridge at the designated time. This option offers greater flexibility since each site may join the conference when they are ready. Conference audio tones indicate when a new site has joined the conference.

Meet & Greet Video Broadcast – the AT&T conference producer greets all sites at once just prior to meeting start time, and turns the conference over to the host. The conference is then monitored along with other conferences. For assistance, participants would call AT&T's main reservations and help desk number at 866-843-3606 or 303-415-3552.

Conference Modes – users may select from a variety of conference modes, or video-switching options, one that is best suited for their needs - based on the nature of their meeting. Since meetings are conducted in a variety of ways, AT&T offers different conference mode options to accommodate the type of meeting required. For example, meetings may require interaction among multiple participants, or they may focus on a single speaker who shares information with all other participants. There may also be a need to control which site is being viewed and heard at a given moment during the meeting. Whatever the meeting need, AT&T has a solution to ensure a successful and effective conferencing experience. The desired conference mode must be selected at time of reservation request; otherwise, the default option is always voice activated switching.

SERVICE LEVELS:

No Service levels are available at this time.

SERVICE AVAILABILITY/LIMITATIONS:

Certain equipment provisions are required based on service type.
